

## Envu Places Trust in Centaur Asia Pacific

Singapore: The divestment of Bayer’s Environmental Science (ES) Professional business to Cinven for US\$2.6 billion in October 2022 resulted in the establishment of Envu.

This independent company, rooted in a 50-year legacy from Bayer Environmental Science, is dedicated to providing environmental solutions.

Centaur Asia Pacific, serving as the exclusive distributor in Singapore, plays a pivotal role in facilitating access to Envu’s cutting-edge solutions for diverse turf management needs.

Envu transcends conventional golf products by offering an extensive range of services, including Professional Pest Management, Forestry, Ornamentals, Industrial Vegetation Management, Lawn & Landscape, Mosquito Management, and Range & Pasture.

Through collaborative efforts with customers, Envu strives to deliver innovative solutions that guarantee lasting and effective results.

Centaur’s exclusive distributorship in Singapore emphasises the trust Envu places in its partners, ensuring that the region’s turf management requirements are addressed with Envu’s advanced solutions.

**Lyna Low**, Deputy General Manager of Centaur Singapore, is enthusiastic about the collaboration. “We appreciate Envu for placing trust in us. We believe that, with the exceptional products Envu offers and Centaur’s expertise and industry network, we can collectively deliver superior turf solutions to our customers,” said Low.

Envu’s formidable product line-up includes Dedicate 200g/L and Signature XTRA Stressgard, essential assets in addressing widespread challenges like dollar spots, pythium, and fairy ring outbreaks on golf courses.

Dedicate 200g/L, a high-impact fungicide, offers year-round protection against various turf diseases, with a focus on summer turf disease pressures. With its broad-spectrum formulation containing tebuconazole and trifloxystrobin, Dedicate effectively combats issues such as Fusarium Patch, Dollar Spot, Anthracnose, and Rust.

Its low dosage requirement and superior penetration make it versatile for use in bowls, golf courses, turf farms, and ornamental landscapes.

Signature XTRA Stressgard takes the spotlight with Stressgard Formulation Technology ensuring enhanced disease control, improved plant health, and flexible application options.

Capable of preventing pythium and anthracnose, this innovative fungicide demonstrates Envu’s commitment to healthy, uniform turf, trusted disease control, and greater application flexibility.
